SMEXhybrid

Trainer: Christian Schindler

Agenda

- Überblick Microsoft 365/Exchange Online
- Basiskonfig
- AAD Connect
- Authentifizierung
- Teams Integration mit Exchange OnPremises
- Planen und einrichten Exchange Hybrid
- Verwaltung der Hybrid-Umgebung
- Migration Public Folder
- Exchange Online Administration
  - Anti-Spam, etc.

Module 1

Planning and provisioning Microsoft 365

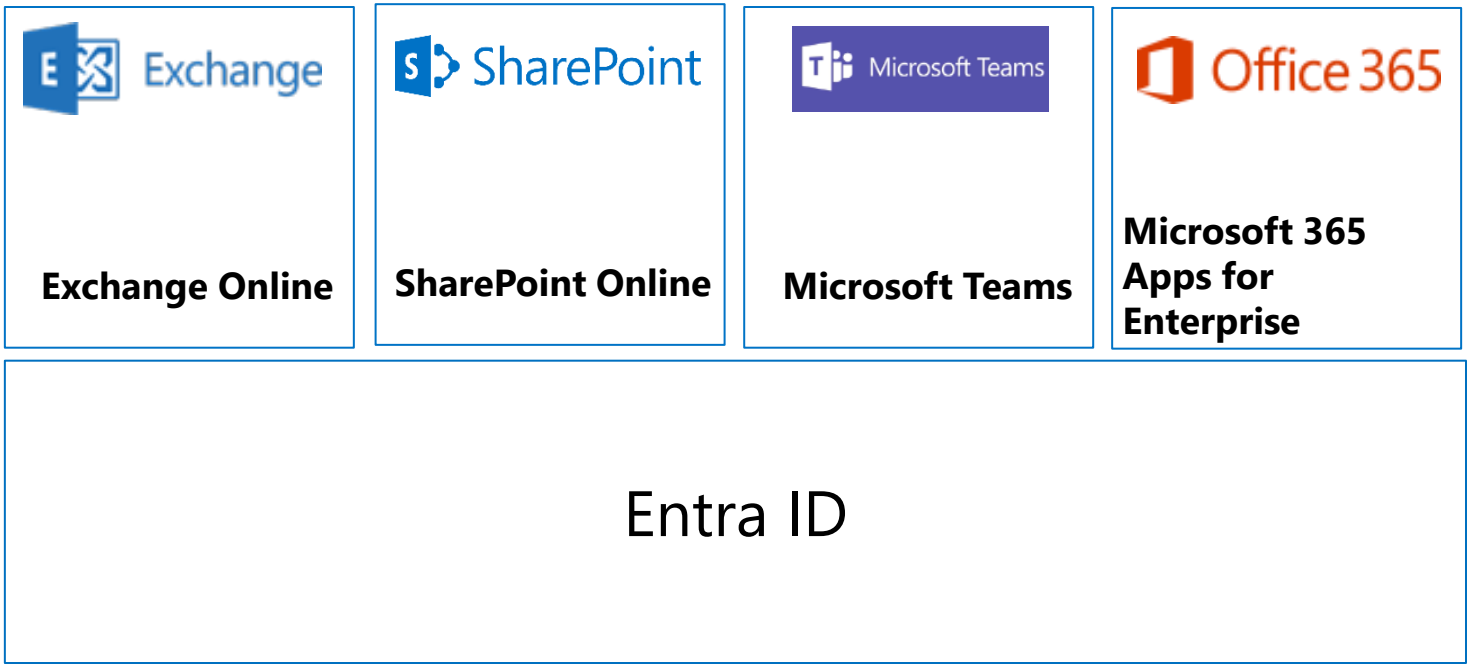

Module Overview

- Overview of Microsoft 365
- Provisioning an Microsoft 365 tenant
- Planning a pilot deployment

Lesson 1: Overview of Microsoft 365

- Microsoft 365 core components
- Microsoft 365 additional components
- Microsoft 365 Business subscriptions
- Microsoft 365 Enterprise subscriptions
- Microsoft 365 Education, Nonprofit, and Government subscriptions
- Planning the Microsoft 365 subscription
- Overview of the Microsoft 365 administrative portals
- Discussion: How will you use Microsoft 365 in your organization?

Microsoft 365 core components

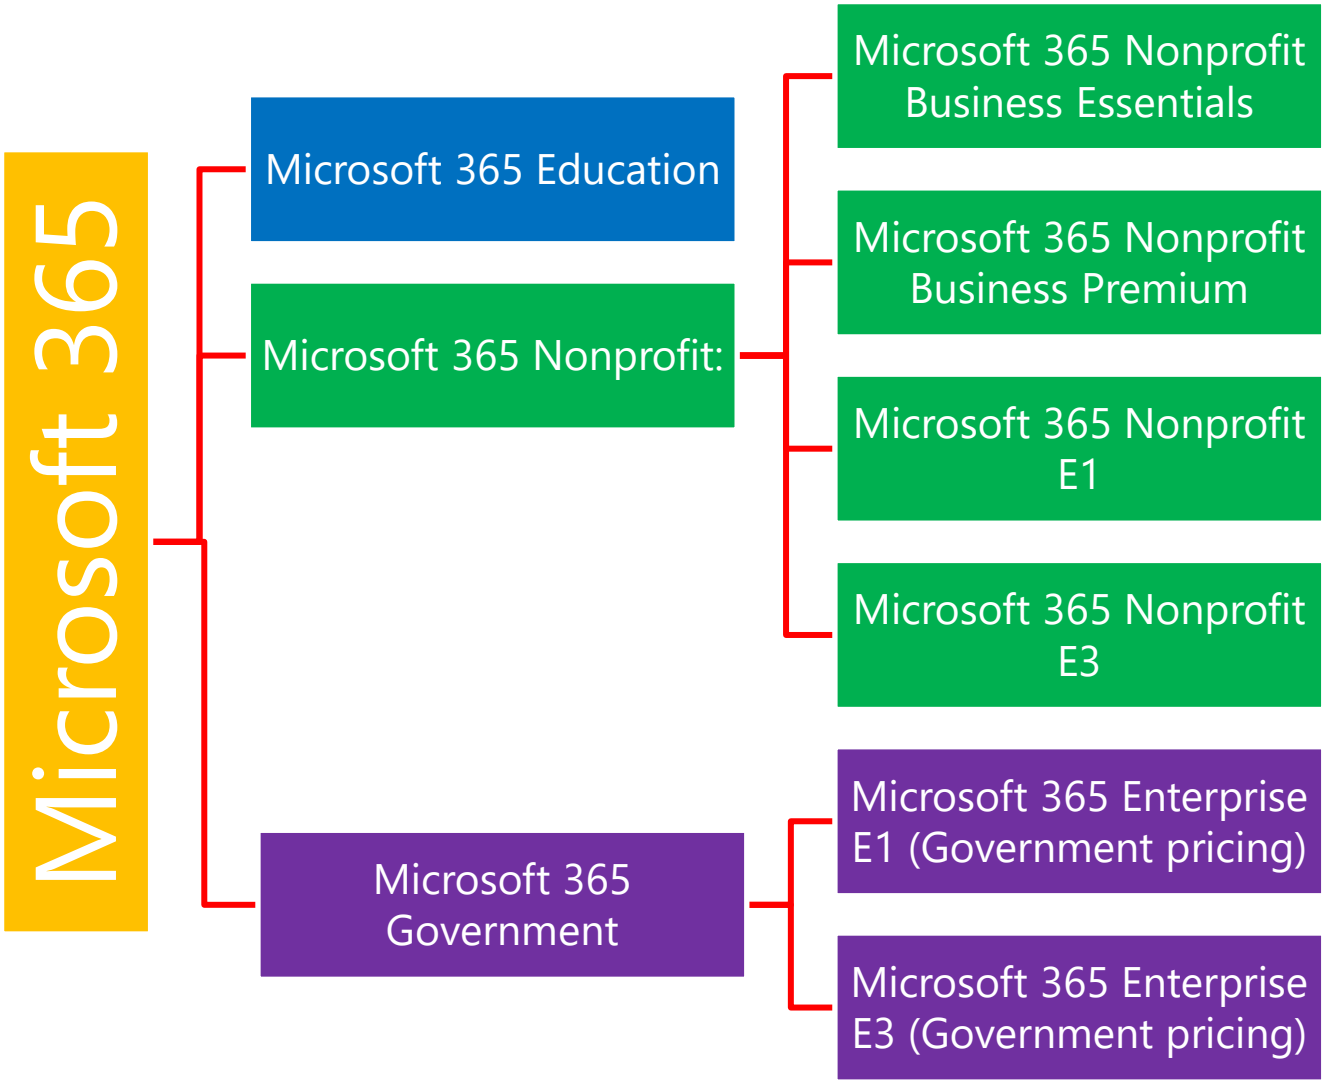

Microsoft 365 Business subscriptions

- Microsoft 365 Business subscriptions include:
  - Microsoft 365 Business Essentials
  - Microsoft 365 Business
  - Microsoft 365 Business Premium
- Microsoft 365 Business subscription features include:
  - Online versions of Office applications, including Word, Excel, OneNote, and PowerPoint
  - Cloud file storage and sharing capabilities with 1 TB storage per user
  - Capacity for a maximum of 300 users

Microsoft 365 Enterprise subscriptions

- Microsoft 365 Enterprise subscriptions include:
  - Microsoft 365 E1
  - Microsoft 365 E3
  - Microsoft 365 E5
- Microsoft 365 Enterprise subscription features include:
  - Online versions of Office applications, including Word, Excel, OneNote, and PowerPoint
  - Cloud file storage and sharing capabilities with 1 TB storage per user
  - Email, IM, audio/video, and web conferencing
  - Compliance tools
  - Intranet site and corporate social network
  - Teams-based workspace
  - Unlimited number of users
  - Option to choose Microsoft 365 ProPlus

Microsoft 365 Education, Nonprofit, and Government subscriptions

Planning the Microsoft 365 subscription

When planning an Microsoft 365 subscription, consider:

- Business requirements
- Current IT infrastructure
- Change-management process
- Future organization growth

Overview of the Microsoft 365 administrative portals

Microsoft 365 administrative tools include:

- Web-based administrative portals:
  - Microsoft 365 admin center
  - Exchange admin center
  - Teams admin center
  - SharePoint admin center
  - OneDrive admin center
  - Security and Compliance Center
  - Entra ID admin center
- Microsoft 365 PowerShell

Discussion: How will you use Microsoft 365 in your organization?

- What are your organization's business requirements?
- How will Microsoft 365 meet your organization's business requirements?
- Which Microsoft 365 subscription would be most suitable for your organization?

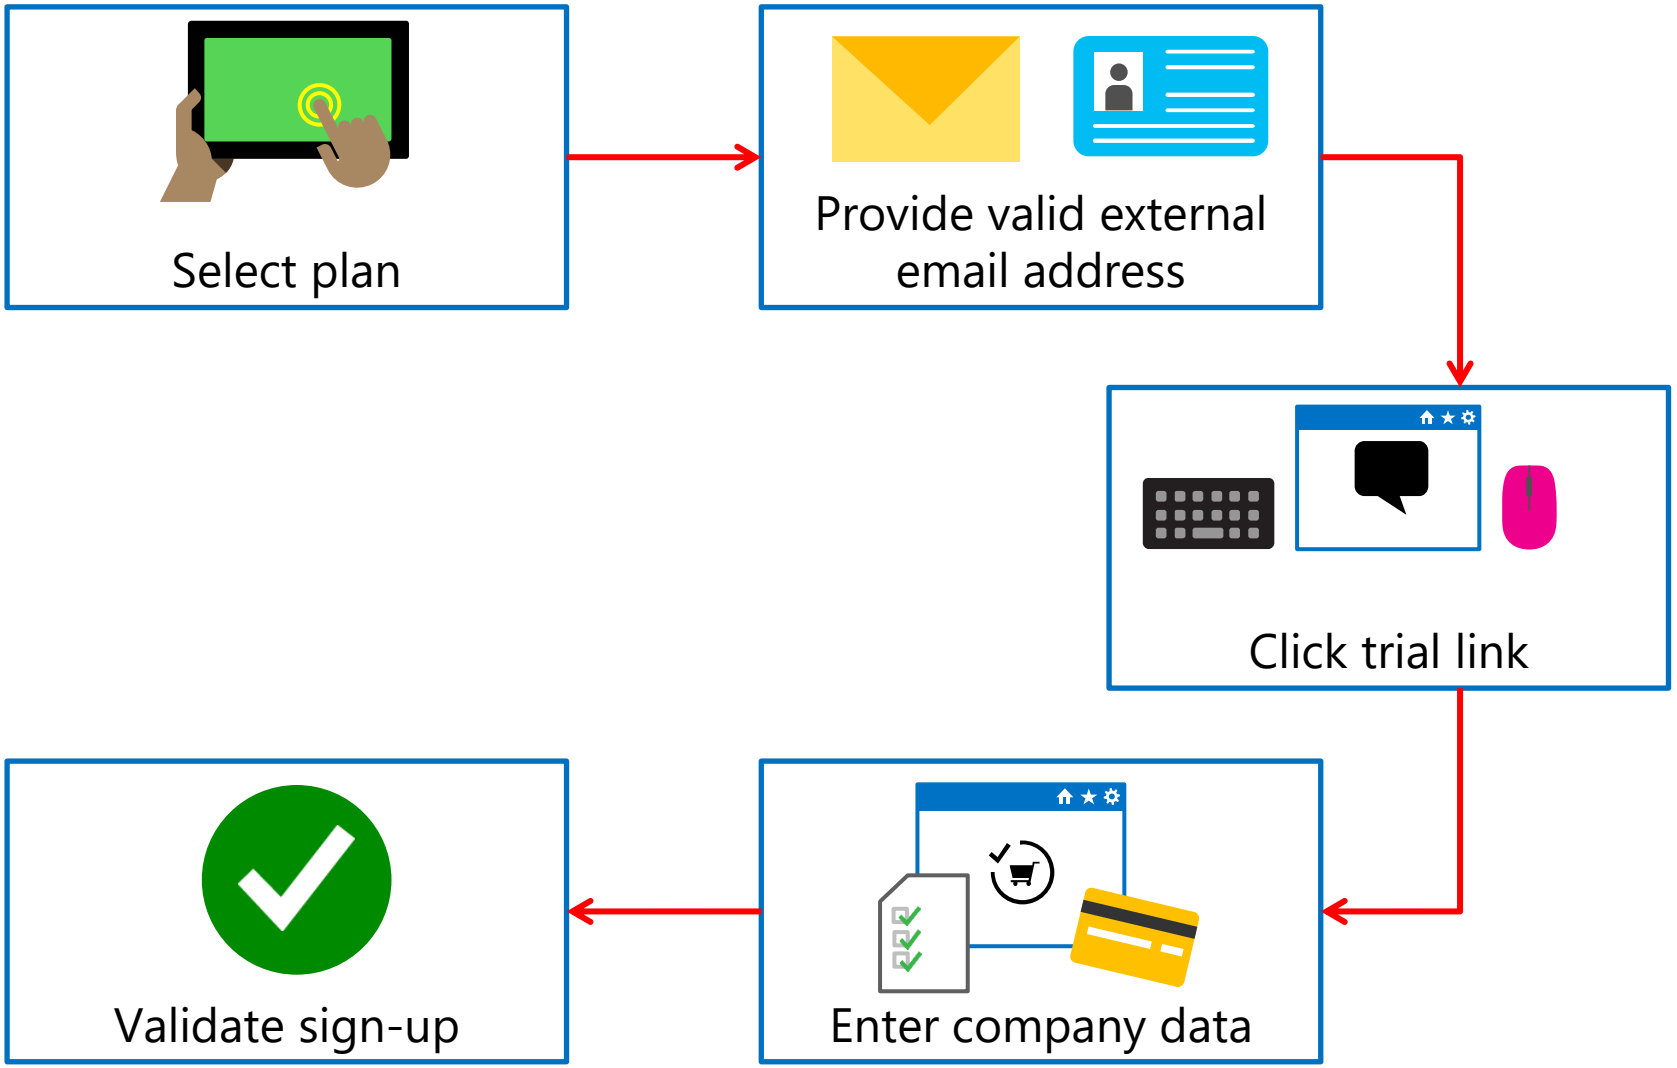

15 minutes

Lesson 2: Provisioning an Microsoft 365 tenant

- Creating an Microsoft 365 tenant
- Microsoft 365 tenant options
- Planning for custom domains
- Adding a custom domain for Microsoft 365
- Planning DNS zones for custom domains
- Configuring DNS records for custom domains
- Managing feature updates

Creating an Microsoft 365 tenant

Microsoft 365 tenant options

Field	Value	Required?	Change	Type
Country/Region	Name	Yes	No	Drop-down list
First/Last names	Tenant admin	Yes	Yes	Text field, 50-character limit
Email	Tenant admin email	Yes	Yes	Text field
Address 1 Address 2 Address 3	Tenant address info	Yes No No	Yes Yes Yes	Text
City	Company City	Yes	Yes	Text
State/County	Company state	Yes	Yes	Drop-down or text
Zip/Postal code	Company Zip	Yes	Yes	Text
Phone	Contact phone	Yes	Yes	Text
Organization name	Name of the tenant company	Yes	Yes	Text

Planning for custom domains

When planning for custom domains, consider:

- Additional Root domains
- Subdomains
- Domain adding order
- DNS record hosting
- Domain numbers
- DNS console access
- Not registering DNS
- Not changing all records
- DNS record propagation

Adding a custom domain for Microsoft 365

1. Check ownership of the domain
2. Check you have access to the DNS console
3. Check that you can make the required changes to DNS records
4. Sign in to the Microsoft 365 admin center
5. Confirm domain ownership in Microsoft 365 by adding an MX or TXT record to DNS
6. Change the default domain to the new domain
7. Add users and assign licenses
8. Set the domain purpose and finish configuring DNS

Planning DNS zones for custom domains

- Custom DNS domains require the creation of appropriate DNS records
- Clients use DNS records to connect to Microsoft 365 services
- Custom DNS zone scenarios:
  - Internal DNS zones and external DNS zones have different names
  - Internal DNS zones and external DNS zones have the same name – Split-brain DNS

Configuring DNS records for custom domains

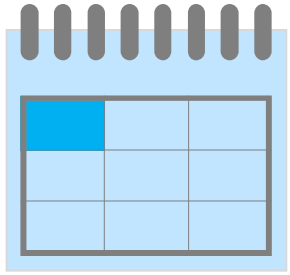

DNS records required for Microsoft 365 include:

Exchange Online	Skype for Business Online	Microsoft 365 Single Sign-On	Mobile Device Management for Microsoft 365	Microsoft Online Services Sign-In Assistant
MX, CNAME, TXT	SRV, SRV, CNAME	Host (A)	CNAME	CNAME

Managing feature updates

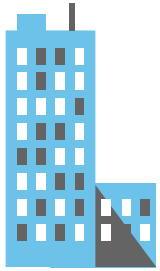

Feature updates in Microsoft 365

Standard release: As per the Microsoft default release schedule

Targeted release

Entire organization

Lesson 3: Planning a pilot deployment

- Comparing an Microsoft 365 pilot to the traditional deployment process
- Discussion: How did your organization implement Microsoft 365?
- Overview of the Microsoft 365 pilot phase
- Gathering customer requirements
- Identifying customer constraints
- Identifying pilot users
- Evaluating the pilot deployment
- Planning the production deployment
- Overview of deployment tools
- Using Microsoft FastTrack for Microsoft 365 onboarding

Comparing an Microsoft 365 pilot to the traditional deployment process

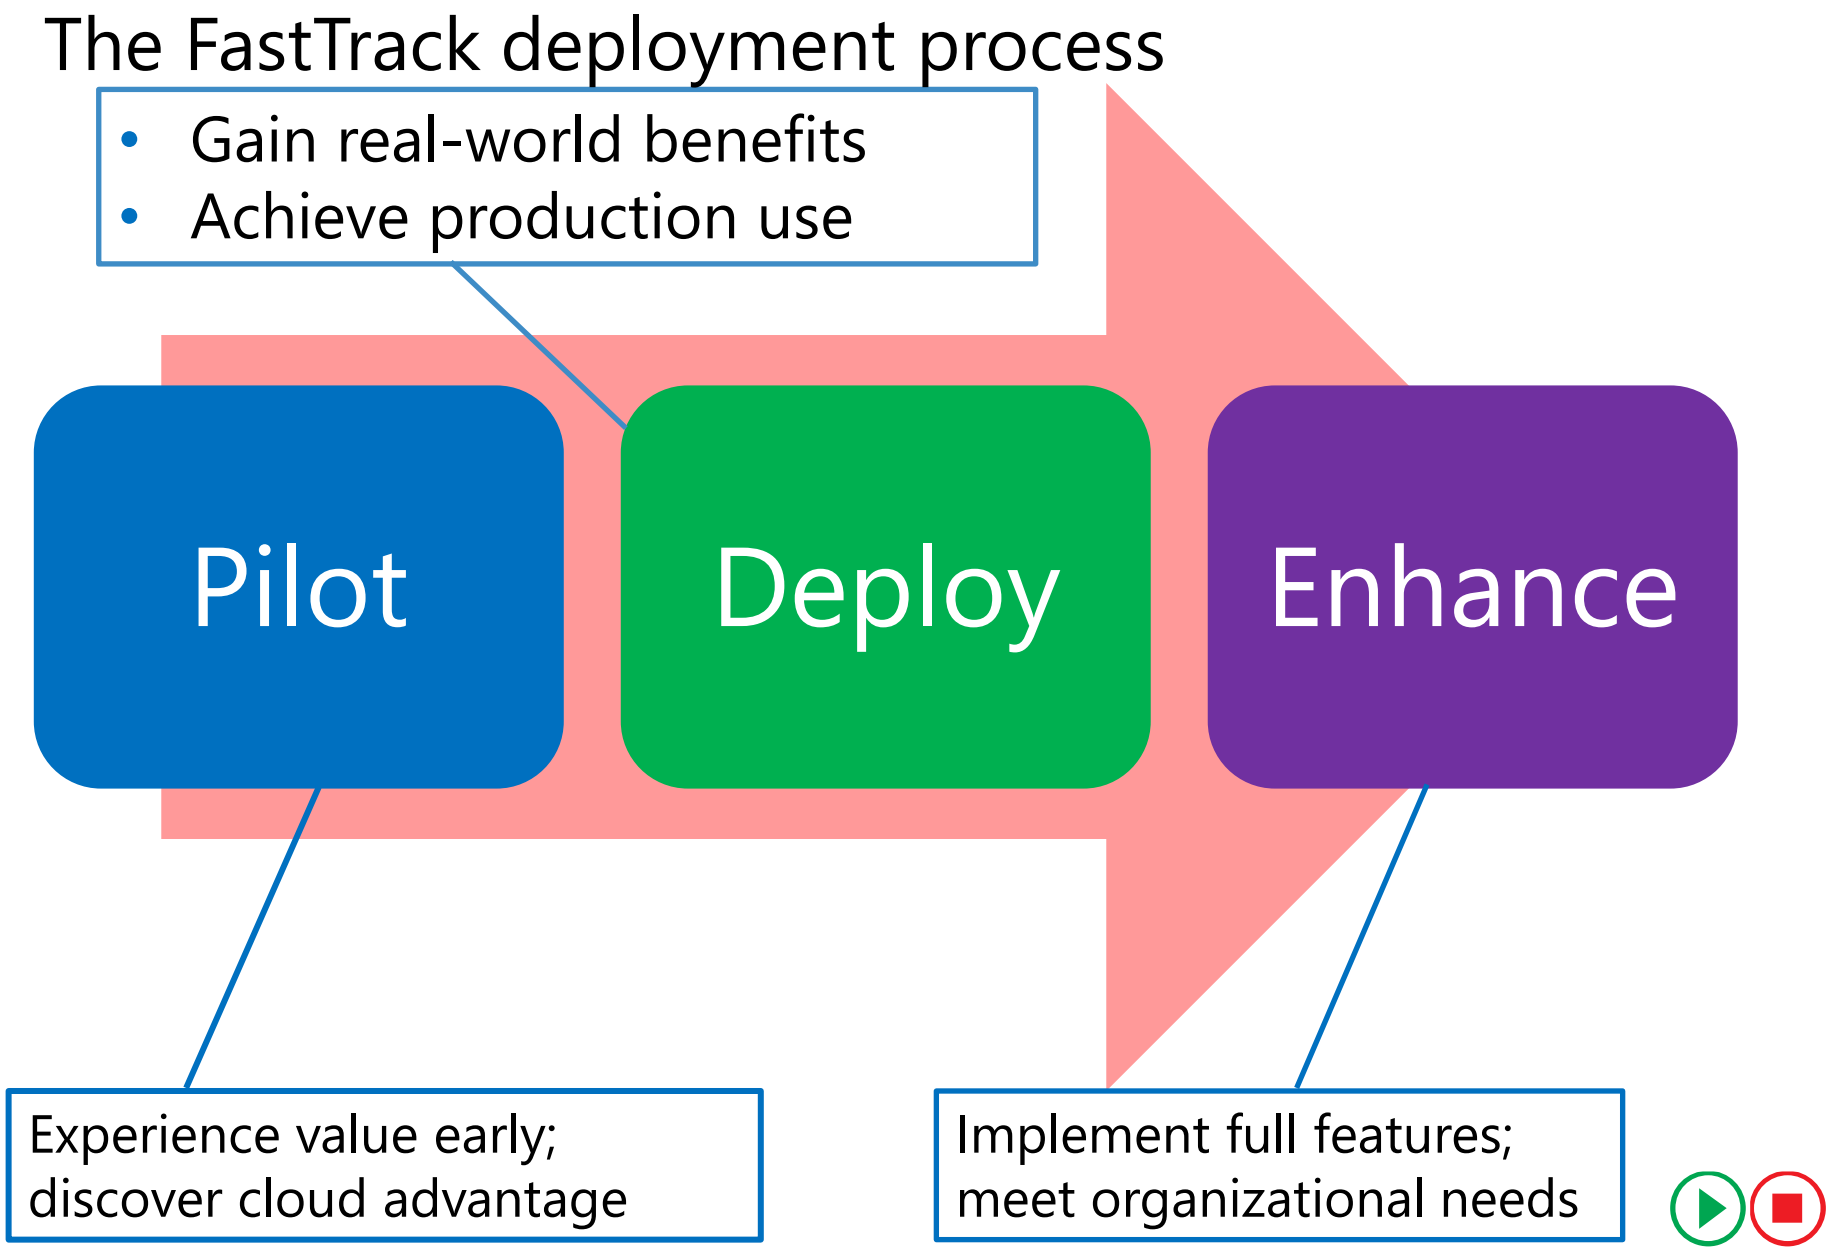

Note: Timeline in Weeks

Do not treat a cloud deployment like an on-premises deployment

Comparing an Microsoft 365 pilot to the traditional deployment process

Discussion: How did your organization implement Microsoft 365?

How did your organization implement Microsoft 365?

15 minutes

Overview of the Microsoft 365 pilot phase

Microsoft 365 pilot objectives:

- Deliver a predictable and consistent pilot experience for the customer
- Demonstrate expertise with Microsoft 365
- Gain a detailed understanding of the customer's environment and priorities
- Highlight next steps for deployment beyond the pilot
- Rapidly transition to service delivery in the customer environment

Overview of the Microsoft 365 pilot phase

Pilot phase activities include:

- Checking prerequisites
- Setting up pilot domains
- Adding users
- Connecting existing email accounts
- Setting up collaboration sites
- Preparing pilot users
- Testing the pilot
- Running the pilot
- Completing the pilot

Overview of the Microsoft 365 pilot phase

Pilot phase outcomes include:

- Provision the Microsoft 365 service
- Create the initial users in the service
- Enable active use of email by pilot users
- Deploy Microsoft 365 ProPlus to pilot users (if required)
- Enable user evaluation of Microsoft 365 services
- Validate the service integration into the customer landscape
- Establish an Microsoft 365 environment that can move to production

Gathering customer requirements

- Industry sector
- Number and types of users
- Geographic spread and working patterns
- Device types and operating systems
- IT department size, location, and management style
- Workloads and migration requirements
- Management attitude toward cloud services

Identifying customer constraints

- Lack of management support for Microsoft 365
- Lack of IT department support for this change
- Costs/funding
- Competition
- Data storage requirements
- Bandwidth

Identifying pilot users

Select pilot users who are:

- Full-time employees
- Trained information workers
- Representative of the overall function of the company
- Of different age, experience, and seniority within their department
- Prepared to provide feedback on the pilot

Evaluating the pilot deployment

- Extending the pilot
  - Continue user pilot
  - Expand the scope
- Ending the pilot
  - Return the environment back to its original state
  - Identify the reasons for non-conversion

Planning the production deployment

Planning production deployment include:

- Planning for the Microsoft 365 Service
  - Service options
  - Identity planning
  - Mail migration planning
- Planning the customer's environment
  - Raise awareness
  - Plan for transition

Overview of deployment tools

- Office TechCenter
- Office Blogs
- Microsoft 365 Trust Center
- Microsoft 365 Service Descriptions
- Microsoft 365 Roadmap
- Microsoft Planning Services

Using Microsoft FastTrack for Microsoft 365 onboarding

- FastTrack helps organizations move to Microsoft 365
- FastTrack is available for organizations that purchase a requried number of Microsoft 365 licenses
- FastTrack includes best practices, tools, resources, and remote personalized assistance by Microsoft engineers
- FastTrack also includes migration support in selected scenarios

Lab: Provisioning Microsoft 365

- Exercise 1: Configuring an Microsoft 365 tenant
- Exercise 2: Configuring a custom domain
- Exercise 3: Exploring the Microsoft 365 administrator interfaces

Logon Information

Virtual machines:	**20347B-LON-DC1** **20347B-LON-CL1**
User names:	**Adatum\Administrator** **Adatum\Beth**
Password:	**Pa55w.rd**

Estimated Time: 75 minutes

Lab Scenario

Adatum Corporation is considering moving some of the core on-premises services such as Exchange Server and SharePoint Server to Microsoft 365. The project steering committee needs to ensure that Microsoft 365 can provide the required functionality and accommodate the corporate security and compliance requirements. To get started, Adatum Corporation has decided to begin a pilot deployment of Microsoft 365 for a group of users in the London office.

As one of the most experienced IT admins at Adatum Corporation, you are responsible for implementing the pilot project. To start, you need to configure the Microsoft 365 tenant, and then configure the custom domain that your organization uses. You also need to ensure that you are comfortable with the Microsoft 365 administrator interfaces.

Lab Review

- Why is it important to specify the correct country/region when you set up an Microsoft 365 account?
- What ports need to be open to ensure client communications with the Microsoft 365 environment, and for what are those ports and protocols used?

Module Review and Takeaways

- Review Question
- Best Practices
