Module 2

Managing Entra ID users and groups

Module Overview

- Managing user accounts and licenses
- Managing passwords and authentication
- Managing security groups in Entra ID
- Managing Entra ID users and groups with Windows PowerShell
- Configuring administrative access

Lesson 1: Managing user accounts and licenses

- User account types
- Creating user accounts
- Managing user licenses
- Managing user accounts
- Deleting and recovering user accounts

User account types

- Cloud identities:
  - Exist only in Entra ID
  - Are suitable only for small organizations
- Synchronized identities:
  - Exist in AD DS and Entra ID
  - Can synchronize passwords
  - Are managed in AD DS
  - You can implement pass-through authentication as an alternative to AD FS
- Federated identities:
  - Add SSO for synchronized identities
  - Require AD FS

Creating user accounts

User provisioning options include:

- Microsoft 365 admin center
- Import multiple users
- Windows PowerShell
- Directory synchronization

Managing user licenses

- While assigning Entra ID service licenses to users, you can:
  - Replace existing licenses
  - Add to existing licenses
- You can view license information such as:
  - Unlicensed users
  - Number of used licenses

Managing user accounts

In the Microsoft 365 admin center, you can modify the user settings in the following categories:

- Account
- Devices
- Licenses and Apps
- Mail
- OneDrive

Deleting and recovering user accounts

- Delete single or multiple users with:
  - Microsoft 365 admin center
  - The **Remove-MsolUser** command in the Microsoft Online module for Windows PowerShell
- Deleted users are inactive for 30 days
- Restore deleted users before the 30-day grace period with Microsoft 365 admin center:
  - The Restore-MsolUser command in the MSOnline module for Windows PowerShell

Lesson 2: Managing passwords and authentication

- Password policy options
- Self-service password management
- Multi-factor authentication
- Planning password policies and authentication

Password policy options

- Password policy:
  - Specify the number of days for password expiration
  - Specify the number of days for the password expiration warning
  - Disable password expiration
- Resetting user passwords:
  - Create a new temporary password for users
- Resetting admin passwords:
  - Ask another administrator to reset it for you
  - Reset it yourself on the sign in screen

Self-service password management

Subscription	User type	Password reset
Entra ID only	Cloud	Self-service password reset
	Synchronized or federated	Contact administrator
Entra ID Premium P1 or P2	Cloud, synchronized, or federated	Self-service password reset

Self-service password reset authentication methods:

- Email
- Mobile phone
- Office phone
- Security questions

Multi-factor authentication

- The tenant administrator enables multi-factor authentication
- Enable multi-factor authentication for each user
- Multi-factor authentication options in Entra ID include:
  - Call to phone
  - Text message to phone
  - Notification through mobile app
  - Verification code from mobile app

Planning password policies and authentication

- Correctly define the administrator roles
- Document and standardize password policies
- Enforce the use of strong passwords
- Use multi-factor authentication
- Ensure that users are educated on organizational security policies

Lab A: Managing Entra ID users and passwords

- Exercise 1: Managing Entra ID users and licenses by using the Microsoft 365 admin center
- Exercise 2: Managing Entra ID password policies

Logon Information

Virtual machine:	**20347B-LON-DC1** **20347B-LON-CL1**
User names:	**Adatum\Administrator** **Adatum\Beth**
Password:	**Pa55w.rd**

Estimated Time: 35 minutes

Lab Scenario

After configuring an Entra ID tenant and preparing it for pilot deployment, you are now ready to start creating user and group accounts in Entra ID. You and your team need to be familiar with how to configure these accounts by using the Microsoft 365 admin center because this will be your primary tool for managing the environment after the deployment is fully functional. Additionally, you need to make sure that the password policy for Entra ID users matches the password policy for on-premises users.

Lab Review

- After creating a user account, what account settings are available for you to edit in the Active users window of the Microsoft 365 admin center?
- What password policy settings are available in Entra ID?

Lesson 3: Managing security groups in Entra ID

- Overview of groups in Entra ID
- Creating and configuring groups
- Deleting groups

Overview of groups in Entra ID

- Group types in Microsoft 365 admin center:
  - Microsoft 365 group
  - Distribution list
  - Mail-enabled security group
  - Security group
- Group types in Exchange admin center:
  - Distribution group
  - Security group (mail-enabled)
  - Dynamic distribution group
- SharePoint Online groups can contain security groups

Creating and configuring groups

- Security groups are not mail-enabled, but you can create mail-enabled security groups
- Use security groups to grant permissions to SharePoint Online sites
- Create groups by using the Microsoft 365 admin center or the **New-MsolGroup** cmdlet
- Nest security groups to improve organization

Deleting groups

- Deleted security groups cannot be recovered
  - Members are not deleted
- Delete security groups by using:
  - Microsoft 365 admin center
  - **Remove-MsolGroup** cmdlet

Lesson 5: Configuring administrative access

- Entra ID administrator roles
- Assigning administrator roles
- Planning delegated administration

Entra ID administrator roles

Entra ID admin center role name	Windows PowerShell role name	Role tasks
Global administrator	Company administrator	Perform all administrative tasks
Billing administrator	Billing administrator	Make purchases, manage subscriptions, manage support tickets, and monitor service health
Password administrator	Helpdesk administrator	Change and reset passwords, manage service requests, and monitor service health
Service administrator	Service support administrator	Manage service requests and monitor service health
User management administrator	User account administrator	Create and delete users and groups, reset passwords, manage service requests, and monitor service health

Assigning administrator roles

- In the Microsoft 365 admin center:
  1. Click Admin > Users
  2. Select a user
  3. Under Edit user roles, assign a role, and then provide an alternate email address
- In Windows PowerShell, use the following commands:
  - **Get-MsolRole**
  - **Get-MsolUserRole**
  - **Get-MsolUserRoleMember**
  - **Add-MsolRoleMember**
  - **Remove-MsolRoleMember**

Planning delegated administration

- Delegated administration process:
  1. Open the offer email message from the partner
  2. Navigate to the authorization page in Office 365
  3. Authorize the partner
  4. Create the trial or subscription account

- Partner-assigned administration roles:
  - Full administration - same as global administrator
  - Limited administration - same as password administrator

Lab B: Managing Entra ID groups and administration

- Exercise 1: Managing Entra ID groups
- Exercise 2: Managing Entra ID users and groups by using Windows PowerShell
- Exercise 3: Configuring service administrators

Logon Information

Virtual machine:	**20347B-LON-DC1** **20347B-LON-CL1**
User names:	**Adatum\Administrator** **Adatum\Beth**
Password:	**Pa55w.rd**

Estimated Time: 60 minutes

Lab Scenario

In addition to creating user accounts, you also need to know how to create group accounts in Entra ID. In this pilot project, you will use Windows PowerShell commands to manage users and groups. If the pilot is successful, you can manage several hundred users and groups, and Windows PowerShell will be a means to manage them efficiently. One of the goals in the pilot project is to test delegated administration in Entra ID, so you also need to delegate password management and billing management to different users.

Lab Review

- How would you design your group structure to minimize adding and removing people from groups?
- What should you do before you can use Windows PowerShell to administer users and groups in Entra ID?
- Why would you create multiple administrative roles in Entra ID by using role-based access control (RBAC)?

Module Review and Takeaways

- Review Questions
- Best Practices
